FIBER LAB

Due to the increased demand for fiber optic products in the broadcast industry, Shattuc provides enhanced fiber capabilities to produce what you need in our high-tech fiber lab.

Our isolated lab from the rest of the building features a positive air pressure room filtered to prevent dirt and contaminants from entering. The room provides space for prep, polish, termination & final testing of fiber optic products. We also use a dark room for fiber evaluation.

Shattuc Cord Specialties, Inc., manufactures a large variety of electrical and non-electrical cords for a wide range of industries. In addition, Shattuc distributes products for the PRO A/V and Broadcasting industries.

Stock levels for Cable (Audio, Video, Triaxial, & SMPTE), Connectors, Tools, Cable Ties, and Cable Labels are constantly updated, which allows most

orders to ship within 24 to 48 hours of order placement. Some standard construction assemblies may also be shipped within this time frame. Visit www.shattuc.com to learn more about us, the products we offer, and our fantastic vendors and partners.
